

Special Issue

Interpersonal Violence Among Adolescents

Message from the Guest Editors

This Special Issue will therefore highlight the importance of implementing preventive actions to not only reduce ADV but also prevent revictimization. Given that prevention should not only be limited to schools but also integrated into the community, ADV intervention programs should address multifactorial components that include individual, relationship, school counselor, community, and societal dynamics. Therefore, this Special Issue will address the behavioral and social determinants of health and showcase research in underserved communities and demographic subgroups.
