Technologies Old and New: Changes, Challenges, and Opportunities in the Era of Post-COVID Healthcare

Message from the Guest Editors

COVID-19 has been a testing time for health systems worldwide. Amid pandemic disruptions, compounding public-health emergencies, and healthcare workforce shortages, technologies have played a pivotal role in alleviating post-COVID-19 burdens on global health. However, while applications of technologies old and new, ranging from telephone-based mental health interventions, artificial intelligence-empowered COVID-19 surveillance infrastructure, to robotics-assisted care for vulnerable communities, hold great potential and promise, they also bring unprecedented changes and challenges to global health systems.
