

## Special Issue

# New Insights into Children's Orthopedic Health

### Message from the Guest Editors

Pediatric orthopedics is a specialized field of medicine focused on diagnosing, treating, and managing musculoskeletal problems in children, from newborns to adolescents. Treating orthopedic conditions in children presents unique challenges that distinguish it from adult orthopedic care. Collaboration with other healthcare professionals, including pediatricians, physical therapists, occupational therapists, and rehabilitation specialists, is essential to provide comprehensive care that addresses all aspects of a child's development and recovery. We are pleased to invite you to contribute to our upcoming Special Issue "New Insights into Children's Orthopedic Health". We encourage the submission of scientific articles, reviews, case studies, and other works on children's orthopedic health, especially related to the following:

- New surgical techniques in pediatric orthopedics;
- Diagnostic tools;
- Spine deformities;
- Congenital deformities of upper and lower limbs;
- Deformities of the foot;
- Pediatric trauma and treatment of long-term consequences of injuries;
- Neuro-orthopedic.

We look forward to receiving your contributions.

---
