

Special Issue

Oral Health and Dental Care in Pediatric Dentistry

Message from the Guest Editor

The oral health in pediatric dentistry has been of great interest in recent years. For this Special Issue, we wish to consider manuscripts that can lead to a clarification of the aspects related to healthcare and oral pathologies in pediatric age, such as the prevention and the presence of caries, malocclusions, bad habits, anomalies in the number and shape of the teeth, absence or reduction in oral hygiene. Great emphasis is currently given to the study of rare diseases of dental competence, such as ectodermal dysplasia, Apert syndrome, Crouzon syndrome, cleidocranial dysostosis, etc. The health of the oral cavity will also be taken into consideration in the presence of systemic diseases, such as autism, blood disorders, neurological diseases, etc. In addition, articles and case reports will be welcome that will consider the study, the therapy and the results of simple and complex dental and maxillofacial trauma in pediatric age. The published papers will contribute to achieving greater knowledge about oral health in children, suggesting possible suitable prevention and therapy protocols for the pathologies of the oral cavity in pediatric age.
