

Special Issue

Dependable and Secure Healthcare in the Era of 5G!

Message from the Guest Editors

With the emergence of smart homes, smart cities, and all things smart, healthcare has become an area of unbelievable influence and development. The combination of high-speed Internet, lower latency, and higher bandwidth will improve digital healthcare. Despite these benefits, the cyber security issues originating from 5G should not be an afterthought. The speed of 5G is indeed a threat if not addressed properly. 5G deployment without security consideration will create a catastrophe in healthcare and can endanger human lives. In healthcare, identity theft, invasion of privacy, and medical record management will become more challenging as massively increased numbers of devices and greater usage of virtualization and the cloud infrastructure will mean a broader, more varied cyber-attack surface. This Special Issue aims at bringing together active researchers from across the globe to share their ideas and recent advances in this exciting area.
