# From Bench to Bed: Kidney Stones Still Challenge Healthcare in 2022

## Message from the Guest Editors

The prevalence of nephrolithiasis is approximately 20.0%, and the health and economic burdens of kidney stone disease are enormous worldwide. Nevertheless, recent advances in medical and surgical management of kidney stone disease have greatly improved health outcomes in this population. The goal of this issue is to share current, state-of-the-art advances achieved in exploring and understanding what underlies pathophysiological mechanisms, their molecular genetic basis, as well as progress achieved in the development of new medications and technical advances in surgical management in this population. The submission deadline is 1 September 2022.
