Message from the Guest Editor

Dear Colleagues,

This Special Issue on energy efficiency in historic buildings addresses the balance between two different aspects of sustainability, i.e., environmental and socio-cultural. On the one hand, amidst growing pressure to reduce energy costs and greenhouse gas emissions, historic buildings stand for a considerable part of societal energy use that necessitates energy-efficient interventions. On the other hand, the historic building stock is an important cultural and material resource that merits management and preservation for the benefit of present and future generations. This Special Issue calls for research on a multitude of aspects, with various scientific perspectives, from the natural sciences and engineering to the social sciences and humanities.

Tor Brostrom
