

Special Issue

Challenges and Advancements in the Cleaning, Conservation and Restoration of Archaeological Small Finds

Message from the Guest Editors

The importance of cultural heritage as an economic and historical resource puts its long-term preservation in the foreground, since, regardless of their diverse nature and composition, works of art are inevitably exposed to recurrent degradation processes. Inappropriate approaches to restoration practice need to be replaced by the development of innovative cleaning and restoration methods that also account for the latest techniques for the conservation of artefacts. The challenge is to replace arbitrary methods in restoration practice with a methodical search for specialised and useful materials to protect, maintain, and restore art. This Special Issue aims to address the practice of restoration of small artefacts and their non-invasive cleaning and sustainable conservation to maintain both the physical properties and cultural significance of such objects. Common materials represented include metals, stones, ceramics, glasses, papers, textiles bone and ivory, mortars, concrete, and painted wall plaster. Accordingly, we propose a Special Issue devoted to the research of innovative cleaning, conservation, and restoration methods for different type of artifacts.

About the Journal

Message from the Editorial Board

Heritage is an international, peer-reviewed, open access journal that focuses on knowledge, conservation, interpretation and management of cultural and natural heritage, by presenting and enabling novelty and advances in sensing technologies, novel methods, best practices and policies. *Heritage* has the ambition to become a “cultural forum”, where scientists and experts offer answers to significant issues affecting cultural and natural heritage, by creating a knowledge bridge between different technological and social disciplines. *Heritage* has an Editorial Board of eminent international leaders and this ensures rigorous peer-review processing for high quality and novel papers. We strongly recommend *Heritage* for the rapid and professional publication of your innovative research and case studies.

Editors-in-Chief

Dr. Francesco Soldovieri

National Research Council of Italy (CNR), Institute for Electromagnetic Sensing of the Environment (IREA), Via Diocleziano 328, 80124 Napoli, Italy

Prof. Dr. Nicola Masini

1. CNR-ISPC (Institute of Heritage Science), 85050 Tito, Italy
2. School of Architecture, University of Basilicata, Potenza, Italy
