**Message from the Guest Editors**

Dear Colleagues,

We are pleased to announce this Special Issue of *Horticulturae*, dedicated to the multifaceted topic of neglected and underutilized plant species (NUS) in horticultural and ornamental systems. Over the last few decades, this topic has received growing attention from the scientific community, as a possible option to face the agricultural challenges of producing more foods and services, within a framework of greater sustainability. Indeed, global urbanization processes, climate change, and the reduction of natural resources are expected to emphasize the vulnerability of mainstream agriculture, satisfying the needs of an ever-increasing world population by leveraging a restricted number of cash crops. In this context, NUS could promote agro-biodiversity, improve the resilience of the agro-ecosystems toward environmental stressors, foster the utilization of nutraceuticals and the diversification of dietary patterns, and provide important local services (environmental, economical, socio-cultural) as ornamentals or in landscapes.

Message from the Editor-in-Chief

Horticultural plants and their products provide sustenance, health, and beauty. A confluence of factors is putting increasing pressure on horticultural production to evolve, and innovative research is addressing these challenges. *Horticulturae* provides a venue to communicate research results in a rapid manner with open access, allowing everyone the opportunity to stay abreast of leading research addressing horticulture. I invite you to consider publishing the results of your research in this high quality, peer-reviewed journal.

Author Benefits

**Open Access:**— free for readers, with article processing charges (APC) paid by authors or their institutions.

**High Visibility:** indexed within Scopus, SCIE (Web of Science), PubAg, AGRIS, FSTA, and many other databases.

**Journal Rank:** *JCR* - Q1 (*Horticulture*) / *CiteScore* - Q1 (*Horticulture*)
