### Message from the Guest Editor

Dear Colleagues,

In fruit crops, plant propagation plays an important role as the number of plants can be rapidly multiplied, retaining desirable characteristics from the mother plants, and shortening the bearing age of plants. Depending on the fruit species, propagation can be achieved sexually by seed or asexually by utilizing specialized vegetative structures of the plant or by employing such techniques as cutting, layering, grafting, and tissue culture.

When the fruits reach the fully ripe stage, one of the major concerns is to keep them fresh and healthy for a long period of time. Harvested fruits require adequate and advanced post-harvest processing technologies for minimizing the qualitative as well as quantitative losses.

The purpose of this Special Issue “Propagation and Post-Harvest of Fruit Crops” aims to present state-of-the-art techniques recently developed by researchers worldwide. Innovative articles on the propagation and post-harvest of any fruit species are welcome in this Special Issue.

## Message from the Editor-in-Chief

Horticultural plants and their products provide sustenance, health, and beauty. A confluence of factors is putting increasing pressure on horticultural production to evolve, and innovative research is addressing these challenges. *Horticulturae* provides a venue to communicate research results in a rapid manner with open access, allowing everyone the opportunity to stay abreast of leading research addressing horticulture. I invite you to consider publishing the results of your research in this high quality, peer-reviewed journal.

## Author Benefits

**Open Access:** free for readers, with article processing charges (APC) paid by authors or their institutions.

**High Visibility:** indexed within Scopus, SCIE (Web of Science), PubAg, AGRIS, FSTA, and other databases.

**Journal Rank:** JCR - Q1 (Horticulture) / CiteScore - Q1 (Horticulture)
