Special Issue

Exploration of Medicinal Plants: Recent Advances and Future Perspectives

Message from the Guest Editor

A large number of medicinal plant species are currently in use, harvested from native populations in wild habitats all over the world, to obtain special active compounds used for therapeutic purposes. Wild herb populations also provide rich sources of raw materials for different industrial purposes. Nowadays, gene expression studies provide valuable information about the background of active compound accumulation, and control mechanisms exist in different medicinal plant species. Characterization of wild herb taxa with the use of molecular biological techniques is a modern approach to the discovery of intraspecific taxonomic differences. Exploring morphological and chemical variability is an essential tool in the conservation of medicinal plant genetic resources as well as a basis for the improvement of new cultivars for growing. Our aim is to provide valuable information on recent findings from the front line of research, concerning morphological, chemical and genetic variation in wild herb species with an insight to the possible use and initiatives of cultivation as well as stress tolerance.

About the Journal

Message from the Editor-in-Chief

Horticultural plants and their products provide sustenance, health, and beauty. A confluence of factors is putting increasing pressure on horticultural production to evolve, and innovative research is addressing these challenges. *Horticulturae* provides a venue to communicate research results in a rapid manner with open access, allowing everyone the opportunity to stay abreast of leading research addressing horticulture. I invite you to consider publishing the results of your research in this high quality, peer-reviewed journal.

Editor-in-Chief

Prof. Dr. Luigi De Bellis

Department of Biological and Environmental Sciences and Technologies (DiSTeBA), Salento University, 73100 Lecce, Italy

Author Benefits

Open Access:

free for readers, with article processing charges (APC) paid by authors or their institutions.

High Visibility:

indexed within Scopus, SCIE (Web of Science), PubAg, AGRIS, FSTA, and other databases.

Journal Rank:

JCR - Q1 (Horticulture) / CiteScore - Q1 (Horticulture)
