

Special Issue

Medicinal and Aromatic Plants in Mediterranean Environments

Message from the Guest Editors

In Mediterranean environments, the large variability in climatic and pedological features generates huge biological diversity, both in terms of the total number of species and the level of endemism. Medicinal and Aromatic Plants (MAPs) represent a big part of this biodiversity. This Special Issue on "Medicinal and Aromatic Plants in Mediterranean Environments" is aimed at embracing all aspects related to the morphological, ecological, and phytochemical diversity of MAPs in Mediterranean environments, including conservation, management, and breeding strategies in the current scenario of environmental and climatic change; perspectives and constraints to cultivation; and the feasibility of the introduction of these strategies in advanced agro-industrial contexts. Original research and review papers are welcome on topics including but not limited to the following:

- Botanical and phytochemical characterization of wild MAP populations;
- Breeding and selection of MAPs;
- Propagation and in vitro techniques;
- Best management practices in field and protected cultivation;
- MAP responses to biotic and abiotic constraints;
- Phytochemistry of essential oils and secondary metabolites;

About the Journal

Message from the Editor-in-Chief

Horticultural plants and their products provide sustenance, health, and beauty. A confluence of factors is putting increasing pressure on horticultural production to evolve, and innovative research is addressing these challenges. *Horticulturae* provides a venue to communicate research results in a rapid manner with open access, allowing everyone the opportunity to stay abreast of leading research addressing horticulture. I invite you to consider publishing the results of your research in this high quality, peer-reviewed journal.
