

# Special Issue

## Advances in Ecophysiology of Horticultural Crops

### Message from the Guest Editors

Horticultural crops are always influenced by the abiotic and biotic stresses present during their cultivation. Ensuring the optimal growth of these crops is of great importance for optimizing their economic, edible and ornamental value. Research on plant ecophysiological characteristics provides insights into the relationships between horticultural crops and stresses, and plays a key role in every aspect of plant production. Therefore, it is necessary to investigate water metabolism, nutrient metabolism, energy metabolism, photosynthesis, and other physiological parameters. As modern science and technology rapidly develop, diagnosis techniques for plant growth and health have made great progress. In the fields of plant ecophysiology and horticultural cultivation, the rapid determination of plant physiological processes and health are of great importance for the real-time regulation of plant growth and development.

The present Special Issue will publish work regarding advances in the ecophysiology of horticultural crops. Scientists from all over the world are invited to submit original research and review articles that relate to such topics.

## About the Journal

### Message from the Editor-in-Chief

Horticultural plants and their products provide sustenance, health, and beauty. A confluence of factors is putting increasing pressure on horticultural production to evolve, and innovative research is addressing these challenges. *Horticulturae* provides a venue to communicate research results in a rapid manner with open access, allowing everyone the opportunity to stay abreast of leading research addressing horticulture. I invite you to consider publishing the results of your research in this high quality, peer-reviewed journal.

### Author Benefits

#### Open Access:

free for readers, with article processing charges (APC) paid by authors or their institutions.

#### High Visibility:

indexed within Scopus, SCIE (Web of Science), PubAg, AGRIS, FSTA, and other databases.

#### Journal Rank:

JCR - Q1 (Horticulture) / CiteScore - Q1 (Horticulture)
