# **Special Issue**

# Suppressive Soils: Connecting Soil Health with Disease Management in Horticultural Crops

### Message from the Guest Editors

This Special Issue is proposed to address topics including host-pathogen-beneficial microbes in a tripartite relationship;shaping suppressive soils through microbial networking;microbial pyramiding and biochemical indicators of suppressive soils;signalomics (transcriptomics- and metabolomics-mediated) of soil health-disease resistance relationships; and agronomic response of soil health-mediated plant disease control. These topics would aid in developing a coevolutionary framework of microbial communities associated with suppressive soils as a part of smart soils to be able to trigger the development of microbially engineered plants through a win-win relationship. We look forward to your submissions.

### **About the Journal**

### Message from the Editor-in-Chief

Horticultural plants and their products provide sustenance, health, and beauty. A confluence of factors is putting increasing pressure on horticultural production to evolve, and innovative research is addressing these challenges. *Horticulturae* provides a venue to communicate research results in a rapid manner with open access, allowing everyone the opportunity to stay abreast of leading research addressing horticulture. I invite you to consider publishing the results of your research in this high quality, peer-reviewed journal.

### Editor-in-Chief

Prof. Dr. Luigi De Bellis

Department of Biological and Environmental Sciences and Technologies (DiSTeBA), Salento University, Lecce, Italy

### **Author Benefits**

### **Open Access:**

free for readers, with article processing charges (APC) paid by authors or their institutions.

### **High Visibility:**

indexed within Scopus, SCIE (Web of Science), PubAg, AGRIS, FSTA, and other databases.

### **Journal Rank:**

JCR - Q1 (Horticulture) / CiteScore - Q1 (Horticulture)
