Advances in Rootstocks for Grape Production

Message from the Guest Editors

In the annals of viticulture, grapevine rootstocks have emerged as integral to sustained production worldwide. Today, these rootstocks not only play a fundamental role in mitigating the onslaught of biotic and abiotic stresses but are also essential for grapevine adaptation to ever-changing environmental conditions. Their importance in the wine and grape industry extends beyond mere resilience, facilitating the expansion of commercial grape cultivation into new regions, thereby expanding the global viticultural landscape. Although not fully understood, grapevine rootstocks are used to address the texture, drainage, salinity, and pH of soil environments. Their interactions with scion cultivar selection are also an ongoing area of interest. Welcome to read and contribute to Special Issue "Advances in Rootstocks for Grape Production".

About the Journal

Message from the Editor-in-Chief

Horticultural plants and their products provide sustenance, health, and beauty. A confluence of factors is putting increasing pressure on horticultural production to evolve, and innovative research is addressing these challenges. *Horticulturae* provides a venue to communicate research results in a rapid manner with open access, allowing everyone the opportunity to stay abreast of leading research addressing horticulture. I invite you to consider publishing the results of your research in this high quality, peer-reviewed journal.

Editor-in-Chief

Prof. Dr. Luigi De Bellis
Department of Biological and Environmental Sciences and
Technologies (DiSTeBA), Salento University, Lecce, Italy

Author Benefits

Open Access:

free for readers, with article processing charges (APC) paid by authors or their institutions.

High Visibility:

indexed within Scopus, SCIE (Web of Science), PubAg, AGRIS, FSTA, and other databases.

Journal Rank:

JCR - Q1 (Horticulture) / CiteScore - Q1 (Horticulture)
