

## Special Issue

# Strategies in Fruit Trees and Vegetables to Increase Nutrient Use Efficiency

### Message from the Guest Editors

Soils cannot always provide the quantities of nutrients that fruit trees and vegetables need. Therefore, fertilization is necessary in many cases. However, a significant proportion of the nutrients applied to crops are not used by the plants. Thus, there is a need to use strategies to increase the nutrients use by plants, such as the establishment of adequate sampling procedures for soil, plant tissue and soil solution; models/methodologies for estimating plant nutritional status, soil nutrient availability and crop yield; adequate doses, timing, forms of nutrients supply and fertilizer sources. The goal of ongoing research and development is to increase productivity and food safe, and reduce the potential for contamination of soil, water and the atmosphere. We encourage interested authors to submit scientific articles on topics related to strategies that can be used for the cultivation of fruit trees and vegetables in order to increase the nutrient use efficiency.

## About the Journal

### Message from the Editor-in-Chief

Horticultural plants and their products provide sustenance, health, and beauty. A confluence of factors is putting increasing pressure on horticultural production to evolve, and innovative research is addressing these challenges. *Horticulturae* provides a venue to communicate research results in a rapid manner with open access, allowing everyone the opportunity to stay abreast of leading research addressing horticulture. I invite you to consider publishing the results of your research in this high quality, peer-reviewed journal.
