

Special Issue

Postharvest Preservation and Processing Techniques for Horticultural Products

Message from the Guest Editors

Postharvest preservation and processing are critical factors in maintaining the quality, safety, and marketability of horticultural products. Despite significant advancements, challenges such as spoilage, nutrient loss, and the need for sustainable practices remain. This Special Issue aims to address these challenges by presenting the latest research on innovative preservation and processing techniques for horticultural products. We invite original research and review articles that explore novel methods, technologies, and strategies aimed at enhancing postharvest quality, extending shelf life, and ensuring food safety. Topics of interest include, but are not limited to, advanced storage solutions, minimal processing techniques, quality control measures, and the impact of these methods on nutritional value and consumer acceptance.

About the Journal

Message from the Editor-in-Chief

Horticultural plants and their products provide sustenance, health, and beauty. A confluence of factors is putting increasing pressure on horticultural production to evolve, and innovative research is addressing these challenges. *Horticulturae* provides a venue to communicate research results in a rapid manner with open access, allowing everyone the opportunity to stay abreast of leading research addressing horticulture. I invite you to consider publishing the results of your research in this high quality, peer-reviewed journal.

Editor-in-Chief

Prof. Dr. Luigi De Bellis
Department of Biological and Environmental Sciences and
Technologies (DiSTeBA), Salento University, Lecce, Italy

Author Benefits

Open Access:

free for readers, with article processing charges (APC) paid by authors or their institutions.

High Visibility:

indexed within Scopus, SCIE (Web of Science), PubAg, AGRIS, FSTA, and other databases.

Journal Rank:

JCR - Q1 (Horticulture) / CiteScore - Q1 (Horticulture)
