

Special Issue

The Advances in Genetics and Biotechnology of Fruits

Message from the Guest Editor

Fruits are an indispensable part of our diet, providing us with essential nutrients and health benefits. Advances in genetics and biotechnology have the potential to revolutionize fruit breeding by enhancing quality traits, disease resistance, and sustainability. In this Special Issue, we aim to capture the latest advancements and novel applications of genetic and biotechnological tools in the field of fruit science. This Special Issue aims to gather and disseminate state-of-the-art research that sheds light on cutting-edge techniques and methodologies applied to fruit genetics and biotechnology. The collection is intended to provide a comprehensive view of current trends, challenges, and opportunities in fruit science research, aligning with the journal's focus on agricultural biotechnology and genetic resources.

About the Journal

Message from the Editor-in-Chief

Horticultural plants and their products provide sustenance, health, and beauty. A confluence of factors is putting increasing pressure on horticultural production to evolve, and innovative research is addressing these challenges. *Horticulturae* provides a venue to communicate research results in a rapid manner with open access, allowing everyone the opportunity to stay abreast of leading research addressing horticulture. I invite you to consider publishing the results of your research in this high quality, peer-reviewed journal.

Editor-in-Chief

Prof. Dr. Luigi De Bellis
Department of Biological and Environmental Sciences and
Technologies (DiSTeBA), Salento University, Lecce, Italy

Author Benefits

Open Access:

free for readers, with article processing charges (APC) paid by authors or their institutions.

High Visibility:

indexed within Scopus, SCIE (Web of Science), PubAg, AGRIS, FSTA, and other databases.

Journal Rank:

JCR - Q1 (Horticulture) / CiteScore - Q1 (Horticulture)
