

Special Issue

Breeding, Cultivation and Postharvest Managements of Kiwifruit

Message from the Guest Editor

The kiwifruit is one of the most recently domesticated fruit crops. Kiwifruit is now cultivated in China, New Zealand, Italy and other countries. However, there are many problems in the production process of kiwifruit, such as the instability of varieties, the threat of bacterial soft rot and PSA and the loss in the process of postharvest treatment. Thus, advanced knowledge on the breeding, cultivation physiology and postharvest management of fruit quality is required in order to promote the development of kiwifruit industry. Therefore, this Special Issue aims to exhibit the advanced scientific information by inviting articles and reviews related to the breeding, diseases and insect pest prevention, cultivation physiology and postharvest management of fruit quality of Actinidia crops.

About the Journal

Message from the Editor-in-Chief

Horticultural plants and their products provide sustenance, health, and beauty. A confluence of factors is putting increasing pressure on horticultural production to evolve, and innovative research is addressing these challenges. *Horticulturae* provides a venue to communicate research results in a rapid manner with open access, allowing everyone the opportunity to stay abreast of leading research addressing horticulture. I invite you to consider publishing the results of your research in this high quality, peer-reviewed journal.

Editor-in-Chief

Prof. Dr. Luigi De Bellis
Department of Biological and Environmental Sciences and
Technologies (DiSTeBA), Salento University, Lecce, Italy

Author Benefits

Open Access:

free for readers, with article processing charges (APC) paid by authors or their institutions.

High Visibility:

indexed within Scopus, SCIE (Web of Science), PubAg, AGRIS, FSTA, and other databases.

Journal Rank:

JCR - Q1 (Horticulture) / CiteScore - Q1 (Horticulture)
