

Special Issue

Subtropical Fruits: Sustainable Management, Propagation Techniques and Seedling Production

Message from the Guest Editors

The cultivation of various subtropical fruit crops around the world boosts the economies of many countries, supplying the domestic market and enabling competitive international trade. The use of physiological principles to guide orchard management will significantly improve productivity and, consequently, fruit quality. Innovation in plant propagation has supported breeding programs and made it possible to produce high-quality seedlings. This Special Issue, “Subtropical Fruits: Sustainable Management, Propagation Techniques and Seedling Production”, will present innovative studies, tools, approaches and techniques, as well as any other innovation that has improved the economics of seedling production. In addition, papers discussing useful innovations such as cultivar variability, advanced soil use and management, mechanization processes, training systems, cultural practices such as irrigation, fertilization, canopy density, thinning, pesticide application technology, fruit descriptors and harvesting methods and other post-harvest approaches that improve the profitability and sustainability of subtropical fruit crops are welcome.

About the Journal

Message from the Editor-in-Chief

Horticultural plants and their products provide sustenance, health, and beauty. A confluence of factors is putting increasing pressure on horticultural production to evolve, and innovative research is addressing these challenges. *Horticulturae* provides a venue to communicate research results in a rapid manner with open access, allowing everyone the opportunity to stay abreast of leading research addressing horticulture. I invite you to consider publishing the results of your research in this high quality, peer-reviewed journal.

Editor-in-Chief
