Food for Health: Bioactive Compounds Analysis and Bioactivity

Message from the Guest Editors

Food provides energy and important nutrients, 'functional foods' provide additional health benefits, as well as meeting basic nutritional and energy needs. For example, fruits and vegetables are consumed mostly as fresh and unprocessed foods, thus providing bioactive components in a raw and natural form, which has significant advantages over processed food products. Extracting, isolating, and characterizing the components of functional foods that provide essential health benefits informs efforts to improve human health via improved foods, nutraceuticals, and novel therapeutics. With recent advances in analytical tools and techniques, we can now identify these key food components and measure their health-promoting activities. This Special Issue presents recent advances in the analysis of bioactive compounds from fruits and vegetables and the determination of their activities, thus providing a treasure trove of information for biochemists, plant breeders, nutritionists, and others interested in the health-promoting effects of fruits and vegetables.

About the Journal

Message from the Editor-in-Chief

Horticultural plants and their products provide sustenance, health, and beauty. A confluence of factors is putting increasing pressure on horticultural production to evolve, and innovative research is addressing these challenges. *Horticulturae* provides a venue to communicate research results in a rapid manner with open access, allowing everyone the opportunity to stay abreast of leading research addressing horticulture. I invite you to consider publishing the results of your research in this high quality, peer-reviewed journal.

Editor-in-Chief

Prof. Dr. Luigi De Bellis
Department of Biological and Environmental Sciences and
Technologies (DiSTeBA), Salento University, Lecce, Italy

Author Benefits

Open Access:

free for readers, with article processing charges (APC) paid by authors or their institutions.

High Visibility:

indexed within Scopus, SCIE (Web of Science), PubAg, AGRIS, FSTA, and other databases.

Journal Rank:

JCR - Q1 (Horticulture) / CiteScore - Q1 (Horticulture)
