## New Breeding Technologies for Fruit Quality Improvement: Research and Extension

### Message from the Guest Editors

Fruit quality is critical for consumer choice, which is determined by varietal characteristics and cultivation techniques. With the change in consumer demand, new cultivars are being bred constantly. It is the research hotspot and difficulties in breeding technologies because the fruit quality is regulated by a complex network of perennial fruits. In order to improve breeding efficiency, the Special Issue is organized. Researches on new fruit breeding technologies, theoretical research of quality formation and maintenance are welcomed for publishing. It is expected to enrich and perfect the theoretical basis of fruit quality improvement, which may be beneficial for breeding of different fruit species.

## About the Journal

### Message from the Editor-in-Chief

Horticultural plants and their products provide sustenance, health, and beauty. A confluence of factors is putting increasing pressure on horticultural production to evolve, and innovative research is addressing these challenges. *Horticulturae* provides a venue to communicate research results in a rapid manner with open access, allowing everyone the opportunity to stay abreast of leading research addressing horticulture. I invite you to consider publishing the results of your research in this high quality, peer-reviewed journal.

### Author Benefits

#### Open Access:

free for readers, with article processing charges (APC) paid by authors or their institutions.

#### High Visibility:

indexed within Scopus, SCIE (Web of Science), PubAg, AGRIS, FSTA, and other databases.

#### Journal Rank:

JCR - Q1 (Horticulture) / CiteScore - Q1 (Horticulture)
