

Special Issue

Advances of Flavor and Aroma in Fruits, Vegetables and Aromatic Herbs

Message from the Guest Editor

It is well known that the presence of volatile compounds and their composition determine the specific aroma of fruits, vegetables, and aromatic herbs. The main chemical families present in fruits, vegetables, and aromatic herbs are monoterpenes, monoterpenoids, and phenylpropanoids. The composition and concentrations of volatile compounds depend on many factors, including climatic and soil conditions, seasonal variation, agronomical practices, cultivars, varieties, etc. On the other hand, sensory analysis is used to quantitatively determine the intensities of the main sensory properties and attributes of fruits, vegetables, and aromatic herbs as well as determine the preference by consumers.

As a result of this, the Special Issue is aimed at gathering outstanding cross-disciplinary approaches (reviews and original research) applying the combination of instrumental analysis (volatile compounds extraction and analysis) and sensory analysis as a tool for quality control of fruits, vegetables, and aromatic herbs as affected by agronomical factors in order to provide extremely valuable information to farmers and growers or developers of new cultivars and varieties.

About the Journal

Message from the Editor-in-Chief

Horticultural plants and their products provide sustenance, health, and beauty. A confluence of factors is putting increasing pressure on horticultural production to evolve, and innovative research is addressing these challenges. *Horticulturae* provides a venue to communicate research results in a rapid manner with open access, allowing everyone the opportunity to stay abreast of leading research addressing horticulture. I invite you to consider publishing the results of your research in this high quality, peer-reviewed journal.

Editor-in-Chief

Prof. Dr. Luigi De Bellis
Department of Biological and Environmental Sciences and
Technologies (DiSTeBA), Salento University, Lecce, Italy

Author Benefits

Open Access:

free for readers, with article processing charges (APC) paid by authors or their institutions.

High Visibility:

indexed within Scopus, SCIE (Web of Science), PubAg, AGRIS, FSTA, and other databases.

Journal Rank:

JCR - Q1 (Horticulture) / CiteScore - Q1 (Horticulture)
