

Special Issue

New Advances in Grapevine Trunk Diseases

Message from the Guest Editor

Grapevine trunk diseases (GTDs) are widespread across the world, with a high impact on vineyards. The percentage of plant or grape loss is high; for example, in France, 13% of vineyards are unproductive. Even if the pathogens involved in GTDs are known, their role in the disease process is still under investigation, and other factors, biotic or abiotic, may be involved. For this Special Issue, "New Advances in Grapevine Trunk Diseases", we welcome articles and reviews containing new research on GTDs, either (i) using new techniques or products against pathogens, such as biocontrol agents, or (ii) applying new methods for a better understanding of plant physiology.

About the Journal

Message from the Editor-in-Chief

Horticultural plants and their products provide sustenance, health, and beauty. A confluence of factors is putting increasing pressure on horticultural production to evolve, and innovative research is addressing these challenges. *Horticulturae* provides a venue to communicate research results in a rapid manner with open access, allowing everyone the opportunity to stay abreast of leading research addressing horticulture. I invite you to consider publishing the results of your research in this high quality, peer-reviewed journal.

Editor-in-Chief
