

## Special Issue

# Mechanism Research and Comprehensive Prevention and Control of Continuous Cropping Obstacles of Horticultural Crops

### Message from the Guest Editors

Continuous cropping obstacles refer to the phenomenon of reduced crop yields, poor quality, poor growth, and increased pests and diseases caused by planting the same crops on the same field for many years under normal management measures. European and American countries call it “replanting disease” or “replanting problem”, Japan calls it “land avoidance phenomenon” or “continuous cropping obstacle”, and it is often called “replanting problem” in China. As a widespread agricultural problem, continuous cropping obstacles is a serious threat to the horticultural crops of the world. The occurrence mechanism of continuous cropping obstacles is complex and diverse. Therefore, the pathogenesis and comprehensive prevention and control of continuous cropping obstacles in horticultural crops will be a research hot topic in the future. In this Special Issue, articles (including original research papers, perspectives, hypotheses, opinions, reviews, and methods) that focus on Mechanism Research and Comprehensive Prevention and Control of Continuous Cropping Obstacles of Horticultural Crops.

## About the Journal

### Message from the Editor-in-Chief

Horticultural plants and their products provide sustenance, health, and beauty. A confluence of factors is putting increasing pressure on horticultural production to evolve, and innovative research is addressing these challenges. *Horticulturae* provides a venue to communicate research results in a rapid manner with open access, allowing everyone the opportunity to stay abreast of leading research addressing horticulture. I invite you to consider publishing the results of your research in this high quality, peer-reviewed journal.
