

## Special Issue

# Healthcare and Healthcare Economics in an Aging World: Adapting to Demographic Change

### Message from the Guest Editor

This Special Issue, "Healthcare and Healthcare Economics in an Aging World: Adapting to Demographic Change", seeks to address the dual challenges of delivering high-quality care to aging populations while ensuring the economic sustainability of healthcare systems. This issue will also highlight the ethical dimensions of healthcare resource allocation in aging societies, addressing concerns such as rationing care, prioritizing treatments, and the potential economic marginalization of older adults. By bringing together research from the fields of health economics, public policy, gerontology, and healthcare innovation, this Special Issue aims to provide a comprehensive understanding of the intersection between aging populations and economic sustainability. It will offer actionable insights for stakeholders navigating the complexities of demographic change, including policymakers, healthcare administrators, and researchers. Healthcare and economics in an aging world are both a critical reflection and a forward-looking guide for ensuring that healthcare systems can deliver compassionate, equitable, and financially viable care for aging populations.
