

## Special Issue

# Novel Procedures and Methodologies for Surface and Underground Water Quality Analysis: Theory and Application

### Message from the Guest Editors

Water quality is a critical factor for sustaining human activities and ecological balance. Both surface and underground water resources are subject to significant influences from natural and anthropogenic activities, which affect the maximum allowable concentrations of various water quality parameters. This Special Issue tends to collect papers dealing with surface and underground water quality chemical and physical parameter analysis using time series modeling, artificial intelligence and machine learning to assess the impact of meteorological parameters.

- Predictive modeling for future water quality levels;
- Assessment of the current water quality conditions;
- Integration of time series analysis techniques;
- Utilization of artificial intelligence in water quality assessment;
- Application of machine learning methods;
- Analysis of surface water quality parameters;
- Examination of underground water quality parameters;
- Consideration of anthropogenic impacts on water resources;
- Incorporation of meteorological factors in water quality assessment;
- Improving understanding of natural and human-induced effects on water quality.

## About the Journal

### Message from the Editor-in-Chief

Hydrology is the study of the waters of the Earth. Hydrology has close ties with hydraulics, hydrogeology and the multiple sciences that study the atmosphere, the land surface, the soil and the subsoil, and ranges from complex problems of risk, forecasting and optimization of water resources to interactions with ecological, urban, social and economic systems. The purpose of *Hydrology* is then to provide a journal where research results and real-world problems can be presented and discussed in order to bridge the traditional gaps between the academic world and the professionals and decision makers. Therefore, *Hydrology*, invites authors to submit their original theoretical, field, experimental, and numerical studies on hydrology with strong emphasis on multidisciplinary approaches and interdisciplinary topics, which cross the typical boundaries of our science.

### Author Benefits

#### High Visibility:

indexed within Scopus, ESCI (Web of Science), PubAg, GeoRef, and other databases.

#### Journal Rank:

JCR - Q2 (Water Resources) / CiteScore - Q1  
(Oceanography)

#### Rapid Publication:

manuscripts are peer-reviewed and a first decision is provided to authors approximately 17.9 days after submission; acceptance to publication is undertaken in 2.8 days (median values for papers published in this journal in the second half of 2025).
