

## Special Issue

# Machine Learning Applications in Soil Water and Groundwater Assessment

### Message from the Guest Editors

This Special Issue would like to explore and showcase the diverse ways in which machine learning techniques are being utilized to improve the assessment, monitoring, and management of soil water and groundwater resources. There are numerous potential topics that can be intertwined with this proposed theme, such as the following:

- Predictive modelling of groundwater levels and quality using machine learning algorithms.
- Estimation and monitoring of soil moisture content at various spatial and temporal scales.
- Detection and prediction of groundwater contamination using advanced machine learning techniques.
- Optimization of irrigation scheduling and water use efficiency through machine learning-based decision support systems.
- Development of sensor networks and data-fusion approaches for real-time monitoring soil water and groundwater dynamics.
- The best use of geophysical covariates to assess the soil water content.
- Integration of remote sensing data with machine learning for improved characterization of hydrological processes.
- Assessment of climate change's impacts on soil water and groundwater resources using machine learning-driven modelling frameworks.

...

### Guest Editors

Dr. Emanuele Barca

Water Research Institute, Department of Earth System Sciences and Technologies for the Environment, National Research Council (CNR), Rome, Italy

Dr. Minxue He

California Department of Water Resources, 1416 9th Street, Sacramento, CA 95814, USA

### Deadline for manuscript submissions

25 December 2025

## About the Journal

### Message from the Editor-in-Chief

*Hydrology* is the study of the waters of the Earth. *Hydrology* has close ties with hydraulics, hydrogeology and the multiple sciences that study the atmosphere, the land surface, the soil and the subsoil, and ranges from complex problems of risk, forecasting and optimization of water resources to interactions with ecological, urban, social and economic systems. The purpose of *Hydrology* is then to provide a journal where research results and real-world problems can be presented and discussed in order to bridge the traditional gaps between the academic world and the professionals and decision makers. Therefore, *Hydrology*, invites authors to submit their original theoretical, field, experimental, and numerical studies on hydrology with strong emphasis on multidisciplinary approaches and interdisciplinary topics, which cross the typical boundaries of our science.

### Author Benefits

#### High Visibility:

indexed within Scopus, ESCI (Web of Science), PubAg, GeoRef, and other databases.

#### Journal Rank:

JCR - Q2 (Water Resources) / CiteScore - Q1  
(Oceanography)

#### Rapid Publication:

manuscripts are peer-reviewed and a first decision is provided to authors approximately 15.7 days after submission; acceptance to publication is undertaken in 2.8 days (median values for papers published in this journal in the first half of 2025).
