Special Issue

Public Hygiene in the Limelight: Establishing Evidence-Based Hygiene Measures and Policy for Institutions and Medical Training

Message from the Guest Editors

Upon the onset of the COVID-19 pandemic, public health services and medical institutions were found to be largely ill equipped, and policymakers struggled to comprehend the extent and complexity of the crisis. Traditional measures, such as contact tracing, border closures, quarantines, and large-scale lockdowns, were implemented; however, the response revealed significant health inequities within a heterogeneous population concerning SARS-CoV-2 transmission. Consequently, effectively addressing the evidencebased hygiene and health literacy issues faced by modern societies requires interdisciplinary, integrated, and holistic approaches to public hygiene and guidance when establishing public health measures and policies. The Special Issue will invite a wide range of submissions, including the following:

- Infectious disease, epidemiology, and prevention;
- The pandemic spatial mapping and modelling of health data.

Topics including qualitative, mixed, quantitative, and applied, empirical, or conceptual research approaches are welcomed. They may address issues concerning the COVID-19 pandemic, as well as other health outcomes.

About the Journal

Message from the Editor-in-Chief

The global burden of healthcare-associated infections remains an issue. The increase in the incidence of antibiotic resistance may result in the development of novel concepts to control the transmission of multiresistant pathogens in various fields. Antiseptic tolerance towards some biocidal agents used for disinfection is being found more and more in selected bacterial species. It is therefore important to carefully balance the expected health benefits of specific hygiene measures against the likely risks and consequences associated with their implementation. I very much hope that this journal can contribute substantial knowledge on the various different aspects of hygiene. The Editorial Board Members and myself cordially invite you to share your latest findings by submitting original research and review articles as well as proposals for Special Issues.

Editor-in-Chief

Prof. Dr. Fernando Pérez-Rodríguez

Department of Food Science and Technology, Faculty of Veterinary, Agrifood Campus of International Excellence (ceiA3), University of Cordoba, 14014 Córdoba, Spain

Author Benefits

Open Access:

free for readers, with article processing charges (APC) paid by authors or their institutions.

High Visibility:

indexed within ESCI (Web of Science), Scopus and other databases.

Journal Rank:

CiteScore - Q2 (Immunology and Microbiology (miscellaneous))
