Message from the Guest Editor

Adolescence is a time of critical development for emerging youth, characterized by sensation seeking, psychological growth, and potential engagement in high-risk behaviors. These high-risk behaviors may lead to future health problems in a person's lifespan, if not prevented. This Special Issue will highlight risk behaviors across adolescence, their risk factors, and prevention programming designed to mitigate high-risk behavior among adolescents. Research for this issue is characterized by high-level analytical methods (e.g., structural equation modeling, meta-analysis, and secondary data) and offers potential ideas for prevention science for adolescent health.

Message from the Editor-in-Chief

Addressing the environmental and public health challenges requires engagement and collaboration among clinicians and public health researchers. Scientific discoveries and advances in this research field play a critical role in providing a rational basis for informed decision-making toward control and prevention of human diseases, especially the illnesses that are induced from environmental exposure to health hazards.

IJERPH provides a forum for discussion of discoveries and knowledge in these multidisciplinary fields. Please consider publishing your research in this high quality peer-reviewed journal.

Author Benefits

Open Access: free for readers, with article processing charges (APC) paid by authors or their institutions.

High Visibility: indexed within Scopus, PubMed, MEDLINE, PMC, Embase, GEOBASE, CAPus / SciFinder, and other databases.

Journal Rank: CiteScore - Q1 (Public Health, Environmental and Occupational Health)
