30 June 2024

Message from the Guest Editor

Eating Disorders (ED) are serious health conditions with high rates of psychiatric comorbidity, medical complications, and elevated mortality risk, thus representing a significant public health problem.

This Special Issue will highlight cutting-edge research on the associations between ED pathology and psychological health. Of particular interest are studies that emphasize the following areas: (1) unique and shared risk factors in understudied or under-represented populations; (2) trajectories of ED pathology and psychological health; shared resilience factors related to ED pathology and psychological health; (3) novel examination of social, environmental, policy, or interactional factors relevant in comorbid disordered eating and psychopathology (e.g., weight stigma, intersectionality, and food insecurity); (4) intervention/prevention studies targeting EDs and comorbid psychopathology; (5) inter- and multi-disciplinary efforts to identify new understandings through collaboration; and 6) the application of new models or techniques to understand the associations between EDs and psychological health.

Message from the Editor-in-Chief

Addressing the environmental and public health challenges requires engagement and collaboration among clinicians and public health researchers. Discovery and advances in this research field play a critical role in providing a scientific basis for decision-making toward control and prevention of human diseases, especially the illnesses that are induced from environmental exposure to health hazards. *IJERPH* provides a forum for discussion of discoveries and knowledge in these multidisciplinary fields. Please consider publishing your research in this high quality, peer-reviewed, open access journal.

Author Benefits

Open Access: free for readers, with article processing charges (APC) paid by authors or their institutions.

High Visibility: indexed within Scopus, PubMed, MEDLINE, PMC, Embase, GEOBASE, CAPlus / SciFinder, and other databases.

Journal Rank: CiteScore - Q1 (*Public Health, Environmental and Occupational Health*)
