Message from the Guest Editors

In recent years, the application of technology and Machine Learning techniques to Health Sciences has been increasing. Technological resources help both the detection of different health problems (physical, psychic, or sensory) and their corresponding intervention to overcome them. This is very significant for the prevention of possible health problems or pathologies. Therefore, it is important to promote research in this area.

This Special Issue aims to collect research experiences that are being developed in the field of health and education, involving the use of technological resources and artificial intelligence and/or machine learning techniques aimed at providing personalized responses to various problems for children and teenagers. The final objective of these studies will be to achieve more precise diagnosis and/or interventions and improve the quality of life of the concerned children and teenagers in different areas and domains. Papers in which computer technologies are applied to treat medical, psychological and pedagogical problems will be considered for publication. Likewise, quantitative, qualitative, or mixed methodological designs will be also of interest.

Message from the Editor-in-Chief

Addressing the environmental and public health challenges requires engagement and collaboration among clinicians and public health researchers. Discovery and advances in this research field play a critical role in providing a scientific basis for decision-making toward control and prevention of human diseases, especially the illnesses that are induced from environmental exposure to health hazards. *IJERPH* provides a forum for discussion of discoveries and knowledge in these multidisciplinary fields. Please consider publishing your research in this high quality, peer-reviewed, open access journal.

Author Benefits

Open Access:—free for readers, with article processing charges (APC) paid by authors or their institutions.

High Visibility: indexed by the Science Citation Index Expanded (Web of Science), Social Sciences Citation Index (Web of Science), MEDLINE (PubMed), Scopus (Elsevier) and other databases. Full-text available in PubMed Central.

Rapid Publication: manuscripts are peer-reviewed and a first decision provided to authors approximately 15.3 days after submission; acceptance to publication is undertaken in 2.9 days (median values for papers published in this journal in the first half of 2020).
