Deadline for manuscript submissions:
closed (30 September 2020)

Message from the Guest Editor

Artificial intelligence (AI) is still a relatively new technology in healthcare, and its adoption remains low. Several studies have been done to show the efficacy of using AI in healthcare and medicine, but only few have been adopted in the real clinical practice. In fact, an active discussion is ongoing about whether AI will eventually replace human physicians in the future. Actually, AI solutions are aimed at gaining information, processing it, and giving a well-defined output to the end-user (the physician, the patient, or the caregiver). The final goal is to give support to physicians in their decisions, and to help patients and caregivers better manage their diseases and therapy.

Message from the Editor-in-Chief

Addressing the environmental and public health challenges requires engagement and collaboration among clinicians and public health researchers. Discovery and advances in this research field play a critical role in providing a scientific basis for decision-making toward control and prevention of human diseases, especially the illnesses that are induced from environmental exposure to health hazards. *IJERPH* provides a forum for discussion of discoveries and knowledge in these multidisciplinary fields. Please consider publishing your research in this high quality, peer-reviewed, open access journal.

Author Benefits

Open Access: free for readers, with article processing charges (APC) paid by authors or their institutions.
High Visibility: indexed within Scopus, PubMed, MEDLINE, PMC, Embase, GEOBASE, CAPlus / SciFinder, and other databases.
Journal Rank: CiteScore - Q1 (Public Health, Environmental and Occupational Health)
