### Message from the Guest Editors

Dear Colleagues,

The risks of not being breastfed are well substantiated and apply to infants in both developed and developing countries. Breastmilk is uniquely suited to an infant's nutritional needs and offers a host of important immunological and anti-inflammatory properties that protect against a variety of illnesses in infancy. The World Health Organization estimates that about 800,000 child lives would be saved annually, if every child was breastfed within an hour of birth, given breastmilk only for the first six months of life, and continued breastfeeding up to the age of two years.

This Special Issue is open to any subject area of public health, health promotion, economics, and policy related to breastfeeding and health outcomes in infancy. The listed keywords suggest just a few of the many possibilities.

## Message from the Editor-in-Chief

Addressing the environmental and public health challenges requires engagement and collaboration among clinicians and public health researchers. Discovery and advances in this research field play a critical role in providing a scientific basis for decision-making toward control and prevention of human diseases, especially the illnesses that are induced from environmental exposure to health hazards. *IJERPH* provides a forum for discussion of discoveries and knowledge in these multidisciplinary fields. Please consider publishing your research in this high quality, peer-reviewed, open access journal.

## Author Benefits

**Open Access:**—free for readers, with article processing charges (APC) paid by authors or their institutions.

**High Visibility:** indexed by the Science Citation Index Expanded (Web of Science), Social Sciences Citation Index (Web of Science), MEDLINE (PubMed), Scopus (Elsevier) and other databases. Full-text available in PubMed Central.

**Rapid Publication:** manuscripts are peer-reviewed and a first decision provided to authors approximately 17.4 days after submission; acceptance to publication is undertaken in 2.9 days (median values for papers published in this journal in the second half of 2020).
