Science and Policy, Tufts
University, 150 Harrison Avenue,
Boston, MA 02111, USA

Dr. Meghan A. Hartwick

Data Scientist, Tufts Initiative for
the Forecasting and Modeling of
Infectious Diseases, Freidman
School of Nutrition Science and
Policy, Tufts University, 150
Harrison Avenue, Boston, MA
02111, USA

Deadline for manuscript
submissions:

closed (28 February 2022)

Message from the Guest Editors

The ongoing pandemic of COVID-19 is affecting every aspect of the modern global community. The response to COVID-19 has already raised many questions as to who is affected, when and how these effects might manifest, and what public health interventions and strategies may help to control the infection. The delayed local and regional emergency responses, the crash of the global supply chain, the inequality in access to healthcare for the sick, the inequality in access to protective gear for medical personnel, the discordant and mixed messages of health officials and political leaders in establishing and releasing lockdowns. In addition, there are many more questions which have not yet even been addressed, or which have only just emerged, for example: Will coronavirus-related infections settle into a predictable seasonal pattern? Will the transmission continue as hospital-acquired infections? Why are some communities affected more than others? Which prevention and control strategies are the likely to work in given conditions? What can be learned from better understanding viral evolution in the context of emerging coronaviruses?

Message from the Editor-in-Chief

Addressing the environmental and public health challenges requires engagement and collaboration among clinicians and public health researchers. Discovery and advances in this research field play a critical role in providing a scientific basis for decision-making toward control and prevention of human diseases, especially the illnesses that are induced from environmental exposure to health hazards. *IJERPH* provides a forum for discussion of discoveries and knowledge in these multidisciplinary fields. Please consider publishing your research in this high quality, peer-reviewed, open access journal.

Author Benefits

Open Access: free for readers, with article processing charges (APC) paid by authors or their institutions.

High Visibility: indexed within Scopus, PubMed, MEDLINE, PMC, Embase, GEOBASE, CAPlus / SciFinder, and other databases.

Journal Rank: CiteScore - Q1 (Public Health, Environmental and Occupational Health)
