Message from the Guest Editors

Dear Colleagues,

Although first detected in January 2020, COVID-19 has now joined the lexicon of international pandemic diseases alongside the flu, SARS, and MERS, among others. To date there is little that is known about the disease, including issues associated with:

- Control;
- Inspection;
- Contamination;
- How it is spread;
- Who is at risk;
- Age, gender, previous illnesses, and smoking;
- Virulence;
- Incubation, infection, and recovery periods;
- Mutations and strains;
- Vaccination;
- False positive and false negative diagnoses;
- Preventative measures;
- Reinfection;
- Access to health and medical facilities;
- Healthcare costs;
- Absence of follow up after release from quarantine;
- Self-quarantining;

It is essential to critically examine the risk management issues associated with COVID-19, with an emphasis on the implications for public health, health and medical care, economics, finance, business, politics, and education.

Author Benefits

Open Access: free for readers, with article processing charges (APC) paid by authors or their institutions.

High Visibility: indexed within Scopus, PubMed, MEDLINE, PMC, Embase, GEOBASE, CAPlus / SciFinder, and other databases.

Journal Rank: CiteScore - Q1 (Public Health, Environmental and Occupational Health)

Message from the Editor-in-Chief

Addressing the environmental and public health challenges requires engagement and collaboration among clinicians and public health researchers. Discovery and advances in this research field play a critical role in providing a scientific basis for decision-making toward control and prevention of human diseases, especially the illnesses that are induced from environmental exposure to health hazards. *IJERPH* provides a forum for discussion of discoveries and knowledge in these multidisciplinary fields. Please consider publishing your research in this high quality, peer-reviewed, open access journal.
