Message from the Guest Editors

With the spread of COVID-19 and the corresponding negative impact on different life aspects, it has become important to understand the ways to deal with the pandemic as a part of daily life. The major challenges are the limitation of accurate/complete data, the effect of restrictions, and variabilities of medical service quality in different countries. In addition, circumstances are dynamically changing due to policies, vaccines, and the advent of new variants all over the world. The investigation correlation between COVID-19 and environmental factors based on the long-term analysis and data curation would lead to better sustainable management of healthcare resources and government policies.

This Special Issue aims to attract articles of high academic standard investigating the links between the COVID-19 pandemic and environmental factors. We welcome original research papers, systematic reviews, and case reports that address topics related to the COVID-19 pandemic and environmental factors.

Message from the Editor-in-Chief

Addressing the environmental and public health challenges requires engagement and collaboration among clinicians and public health researchers. Discovery and advances in this research field play a critical role in providing a scientific basis for decision-making toward control and prevention of human diseases, especially the illnesses that are induced from environmental exposure to health hazards. *IJERPH* provides a forum for discussion of discoveries and knowledge in these multidisciplinary fields. Please consider publishing your research in this high quality, peer-reviewed, open access journal.

Author Benefits

Open Access: free for readers, with article processing charges (APC) paid by authors or their institutions.

High Visibility: indexed within Scopus, PubMed, MEDLINE, PMC, Embase, GEOBASE, CAPus / SciFinder, and other databases.

Journal Rank: CiteScore - Q1 (*Public Health, Environmental and Occupational Health*)
