Health Sciences, School of Public
Health, University of Illinois at
Chicago, Chicago, IL 60607, USA

Message from the Guest Editors

Cancer burden varies across various populations, with higher incidence and mortality of specific cancer types in some populations compared to others, resulting from varying degree of interactions between genetic/biologic, behavioral, societal, and environmental risk factors. Structural racism and other structural factors cause residential segregations, educational attainment, employment, and income disparities, and poor built environment that limits access to safe space for physical activities and availability of an access to nutritious foods.

Cultural values may also affect choice of care and treatment. Research is necessary to further understand the underlying causes for cancer disparities and to develop policies, recommendations, and clinical practices to reduce cancer disparities and build equity in cancer prevention, treatment, and care.

Message from the Editor-in-Chief

Addressing the environmental and public health challenges requires engagement and collaboration among clinicians and public health researchers. Discovery and advances in this research field play a critical role in providing a scientific basis for decision-making toward control and prevention of human diseases, especially the illnesses that are induced from environmental exposure to health hazards. *IJERPH* provides a forum for discussion of discoveries and knowledge in these multidisciplinary fields. Please consider publishing your research in this high quality, peer-reviewed, open access journal.

Author Benefits

Open Access: free for readers, with article processing charges (APC) paid by authors or their institutions.

High Visibility: indexed within Scopus, PubMed, MEDLINE, PMC, Embase, GEOBASE, CAPus / SciFinder, and other databases.

Journal Rank: CiteScore - Q1 (*Public Health, Environmental and Occupational Health*)
