# **Message from the Guest Editors**

The worldwide prevalence of celiac disease (CD) is 0,7-1,4%. CD is associated with intestinal barrier disturbances followed by diverse symptoms and adverse events. Numerous conditions contribute to gut barrier failure and generation of symptoms mimicking CD. Usually, diagnosing CD in symptomatic children is done without clinical delay. However, both CD diagnosis as well as differential diagnosis of gluten and non-gluten related enteropathies in adults are way more complex.

Recent evidence points towards small bowel (SB) microbiota alterations contributing to the pathogenesis of CD and non-CD small bowel enteropathies. Investigation into this field is important as the current choice of treatment includes variety of complex and sometimes contrasting strategies.

Deadline for manuscript submissions:

closed (31 July 2019)

## Message from the Editor-in-Chief

Addressing the environmental and public health challenges requires engagement and collaboration among clinicians and public health researchers. Discovery and advances in this research field play a critical role in providing a scientific basis for decision-making toward control and prevention of human diseases, especially the illnesses that are induced from environmental exposure to health hazards. *IJERPH* provides a forum for discussion of discoveries and knowledge in these multidisciplinary fields. Please consider publishing your research in this high quality, peer-reviewed, open access journal.

#### **Author Benefits**

**Open Access:** free for readers, with article processing charges (APC) paid by authors or their institutions.

**High Visibility:** indexed within Scopus, PubMed, MEDLINE, PMC, Embase,

GEOBASE, CAPlus / SciFinder, and other databases.

Journal Rank: CiteScore - Q1 (Public Health, Environmental and Occupational Health)
