Message from the Guest Editors

Dear Colleagues,

This Special Issue specifically, but not exclusively, seeks to study the effect of all environmental factors, including natural, social, and economic environments on public mental health and medical care during this pandemic. We also intend to complete and expand our knowledge of changes in social behavior. It has already been demonstrated that many of these pandemic rules of life have left their mark on interpersonal relationships. To date, not all endogenous personality factors that could potentially be predictors of increased pandemic stress are known. It is important to understand the social mechanisms and behaviors that may modify the intensity of perceived stress. In this aspect, the identification of those constraints that exacerbate pandemic stress seems to be crucial. Therefore, it is particularly important to seek out all methods to effectively combat pandemic stress in its widest sense. Thus, we want to identify any ways to prevent the negative effects of restrictions introduced during the COVID-19 pandemic.

Message from the Editor-in-Chief

Addressing the environmental and public health challenges requires engagement and collaboration among clinicians and public health researchers. Discovery and advances in this research field play a critical role in providing a scientific basis for decision-making toward control and prevention of human diseases, especially the illnesses that are induced from environmental exposure to health hazards. *IJERPH* provides a forum for discussion of discoveries and knowledge in these multidisciplinary fields. Please consider publishing your research in this high quality, peer-reviewed, open access journal.

Author Benefits

Open Access: free for readers, with article processing charges (APC) paid by authors or their institutions.

High Visibility: indexed within Scopus, PubMed, MEDLINE, PMC, Embase, GEOBASE, CAPlus / SciFinder, and other databases.

Journal Rank: CiteScore - Q1 (Public Health, Environmental and Occupational Health)
