Message from the Guest Editors

Endometrial cancer is the most prevalent gynecologic malignancy in Western countries, and the fourth most common cancer in women worldwide. This may be related to the increase of the risk factors, known and unknown, and to inadequate diagnosis, risk stratification, and treatment. In fact, the risk stratification is still based on a poorly reproducible histologic examination that leads to an inaccurate assessment of the risk of disease recurrence and death, with over-treatment and under-treatment of thousands of patients. Moreover, this risk assessment has lumped together different prognostic groups of endometrial cancer within trials, with misleading results. In 2013, the Cancer Genome Atlas Research Network (TCGA) identified four novel prognostic groups of endometrial cancer, laying the foundation for tailored risk stratification and treatment. A new era of endometrial cancer medicine and research has begun, and there is a great necessity that we join our efforts against a common foe.

This Special Issue seeks research on endometrial cancer in the light of these new findings and the need for a revolution to reverse the negative epidemiological trend.

Message from the Editor-in-Chief

Addressing the environmental and public health challenges requires engagement and collaboration among clinicians and public health researchers. Discovery and advances in this research field play a critical role in providing a scientific basis for decision-making toward control and prevention of human diseases, especially the illnesses that are induced from environmental exposure to health hazards. *IJERPH* provides a forum for discussion of discoveries and knowledge in these multidisciplinary fields. Please consider publishing your research in this high quality, peer-reviewed, open access journal.

Author Benefits

Open Access: free for readers, with article processing charges (APC) paid by authors or their institutions.

High Visibility: indexed within Scopus, PubMed, MEDLINE, PMC, Embase, GEOBASE, CAPus / SciFinder, and other databases.

Journal Rank: CiteScore - Q1 (*Public Health, Environmental and Occupational Health*)
