Deadline for manuscript  
submissions:

**closed (31 August 2021)**

### **Message from the Guest Editor**

There is growing recognition of the important role environment plays in health around the globe. Aspects of the natural, built, and social environment can lessen or exacerbate inequities in health and access to health-related services. Research as well as national and international policies have long acknowledged gender inequalities in health. There are differential vulnerabilities across genders leading to inequitable health outcomes, differential economic and social consequences of poor health and reproductive health, differential access to health-related services, and differential exposures to health-related factors. Research also suggests that, due largely to structural gender inequalities, women often experience and engage with the environment in distinct ways and that these differences can lead to disparities in health and access to health. For this issue of *IJERPH*, we invite submissions that will advance our understanding of how women's health and access to health-related services are shaped by factors in the natural, built, and social environment around the world.

## Message from the Editor-in-Chief

Addressing the environmental and public health challenges requires engagement and collaboration among clinicians and public health researchers. Scientific discoveries and advances in this research field play a critical role in providing a rational basis for informed decision-making toward control and prevention of human diseases, especially the illnesses that are induced from environmental exposure to health hazards.

*IJERPH* provides a forum for discussion of discoveries and knowledge in these multidisciplinary fields. Please consider publishing your research in this high quality peer-reviewed journal.

## Author Benefits

**Open Access:** free for readers, with article processing charges (APC) paid by authors or their institutions.

**High Visibility:** indexed within Scopus, PubMed, MEDLINE, PMC, Embase, GEOBASE, CAPlus / SciFinder, and other databases.

**Journal Rank:** CiteScore - Q1 (Public Health, Environmental and Occupational Health)
