Message from the Guest Editors

With 2.3 billion extra people living in the world's cities by 2050, urban growth represents a significant challenge for management authorities, especially in less-developed countries, where the urban population will be multiplied by 1.7 within the next 30 years. It is expected that this growth will be mostly absorbed by the development of unzoned neighbourhoods in metropolitan areas, as well as secondary cities. One third of the world's urban citizens are currently living in informal settlements, and this value reaches two thirds in Africa. These unprecedented trends of urbanization are greatly contributing to an accelerated modification of the socio-environment of the cities' inhabitants and has a wide range of consequences: high human population densities; poorly-developed basic services; increased exchange of goods and population mobility; increases in air, soil and water pollution; shifts in cultural food resources and habits; etc. This Special Issue of IJERPH will focus on the environment–health interplay in the cities of less-developed countries.

Message from the Editor-in-Chief

Addressing the environmental and public health challenges requires engagement and collaboration among clinicians and public health researchers. Discovery and advances in this research field play a critical role in providing a scientific basis for decision-making toward control and prevention of human diseases, especially the illnesses that are induced from environmental exposure to health hazards. *IJERPH* provides a forum for discussion of discoveries and knowledge in these multidisciplinary fields. Please consider publishing your research in this high quality, peer-reviewed, open access journal.

Author Benefits

Open Access:—free for readers, with article processing charges (APC) paid by authors or their institutions.

High Visibility: indexed by the Science Citation Index Expanded (Web of Science), Social Sciences Citation Index (Web of Science), MEDLINE (PubMed), Scopus (Elsevier) and other databases. Full-text available in PubMed Central.

Rapid Publication: manuscripts are peer-reviewed and a first decision provided to authors approximately 15.3 days after submission; acceptance to publication is undertaken in 2.9 days (median values for papers published in this journal in the first half of 2020).
