Message from the Guest Editor

There have been many studies published on mental health after disasters. However, it is rare to see reports on effective intervention studies aimed at improving post-disaster mental health. This Special Issue aims to discuss new knowledge or cutting-edge development in the disaster medicine, psychiatry and social epidemiology research field through selected works, which will make a great contribution to the community. We consider that this issue will be the best forum for disseminating excellent research findings as well as sharing innovative ideas in the field.

Disasters include not only earthquakes, but also typhoons, heavy rains, forest fires, and, more recently, the COVID-19 pandemic. The study target may include children and adults, the general population, health care professionals, and supporters.

Message from the Editor-in-Chief

Addressing the environmental and public health challenges requires engagement and collaboration among clinicians and public health researchers. Scientific discoveries and advances in this research field play a critical role in providing a rational basis for informed decision-making toward control and prevention of human diseases, especially the illnesses that are induced from environmental exposure to health hazards.

IJERPH provides a forum for discussion of discoveries and knowledge in these multidisciplinary fields. Please consider publishing your research in this high quality peer-reviewed journal.

Author Benefits

Open Access: free for readers, with article processing charges (APC) paid by authors or their institutions.

High Visibility: indexed within Scopus, PubMed, MEDLINE, PMC, Embase, GEOBASE, CAPlus / SciFinder, and other databases.

Journal Rank: CiteScore - Q1 (Public Health, Environmental and Occupational Health)
