Message from the Guest Editor

Mental health is a major public health- and a service system issue all around the world. There is an emerging need to prioritize it in agendas in both developed and developing countries. Among the illnesses, mental health disturbances involve the highest losses of quality of life and functioning, and these disturbances affect strongly the people's ability to connect and cope with societal stress. At the largest, their impact extends to family generations as well as personal social networks and society as a whole.

In this Special Issue of the journal, we aim at providing insight regarding the mental health needs of people in societies that often are in transition of some kind. Mental health services and social policy affect the well being and productivity of populations in all countries. Poor living conditions, discrimination and lack of support is increasing the burden of mental illnesses worldwide, but the developing countries have to struggle in particular to find political interest and effective services for mental health.

Message from the Editor-in-Chief

Addressing the environmental and public health challenges requires engagement and collaboration among clinicians and public health researchers. Discovery and advances in this research field play a critical role in providing a scientific basis for decision-making toward control and prevention of human diseases, especially the illnesses that are induced from environmental exposure to health hazards. *IJERPH* provides a forum for discussion of discoveries and knowledge in these multidisciplinary fields. Please consider publishing your research in this high quality, peer-reviewed, open access journal.

Author Benefits

Open Access: free for readers, with article processing charges (APC) paid by authors or their institutions.

High Visibility: indexed within Scopus, PubMed, MEDLINE, PMC, Embase, GEOBASE, CAPus / SciFinder, and other databases.

Journal Rank: CiteScore - Q1 (*Public Health, Environmental and Occupational Health*)
