Message from the Guest Editors

Developmental concepts are emphasized for major mental health issues in childhood, including ADHD and ASD, and it is accepted as a given fact that adverse childhood experiences can alter the developmental trajectory of individuals. Mental health issues have negative impacts on individual, families, and society, and also result in stigma. Much research is underway to uncover the interplay of biological substrates, psychological temperament, and environmental experiences.

This Special Issue aims to share and highlight the research findings on various issues experienced from childhood to adulthood. It is not limited to ADHD and ASD, but also includes media exposure, trauma, self-harm, etc.

Message from the Editor-in-Chief

Addressing the environmental and public health challenges requires engagement and collaboration among clinicians and public health researchers. Discovery and advances in this research field play a critical role in providing a scientific basis for decision-making toward control and prevention of human diseases, especially the illnesses that are induced from environmental exposure to health hazards. *IJERPH* provides a forum for discussion of discoveries and knowledge in these multidisciplinary fields. Please consider publishing your research in this high quality, peer-reviewed, open access journal.

Author Benefits

Open Access: free for readers, with article processing charges (APC) paid by authors or their institutions.

High Visibility: indexed within Scopus, PubMed, MEDLINE, PMC, Embase, GEOBASE, CAPus / SciFinder, and other databases.

Journal Rank: CiteScore - Q1 (*Public Health, Environmental and Occupational Health*)
