### Message from the Guest Editors

Studies on the effects of information and communication technologies (ICTs) on the psychosocial wellbeing of users have focused both on studying how these ICTs can favor the sociability of their users and on analyzing a less benign aspect of these communication technologies: their capacity to generate dependence in users and, in some cases, addiction. Dependence on ICTs may generate undesirable outcomes that can increase the vulnerability of users. This vulnerability may refer to the psychosocial adjustment of users, although it is not the only type of potentially associated vulnerability (e.g., cybervictimization). In this Special Issue, we intend precisely to give visibility to empirical research on the effects of psychological dependence on new technologies and their various effects on the social life and the security of users. Special attention will be given to aspects such as addiction to social communication devices (e.g., smartphones), taking into account their main background at the individual, social, and cultural levels. Empirical research that seeks to link the technological dependence and cybersecurity of users will also be welcome.

## Message from the Editor-in-Chief

Addressing the environmental and public health challenges requires engagement and collaboration among clinicians and public health researchers. Scientific discoveries and advances in this research field play a critical role in providing a rational basis for informed decision-making toward control and prevention of human diseases, especially the illnesses that are induced from environmental exposure to health hazards.

*IJERPH* provides a forum for discussion of discoveries and knowledge in these multidisciplinary fields. Please consider publishing your research in this high quality peer-reviewed journal.

## Author Benefits

**Open Access:** free for readers, with article processing charges (APC) paid by authors or their institutions.

**High Visibility:** indexed within Scopus, PubMed, MEDLINE, PMC, Embase, GEOBASE, CAPus / SciFinder, and other databases.

**Journal Rank:** CiteScore - Q1 (Public Health, Environmental and Occupational Health)
