Message from the Guest Editor

Quality in healthcare is an ongoing challenge for many health organisations across a broad range of specialties. Health service improvement through clinical redesign or co-design provides an opportunity to undertake a structured investigation to review and identify strengths and weaknesses of service provision through a patient-focussed lens. Healthcare is a complex and constantly changing environment which requires a multidisciplinary skill set for the delivery of efficient, effective and high-quality services.

This Special Issue aims to present original research, articles, reviews and short communications in the area of healthcare quality improvement and service redesign with a focus on the following:

Health service improvement in the public health domain

The development, implementation and evaluation of quality improvement initiatives in healthcare

Patient-centered clinical redesign and its effects on patient care

Co-design for forward planning of quality improvement in healthcare

an Open Access Journal by MDPI

Message from the Editor-in-Chief

Addressing the environmental and public health challenges requires engagement and collaboration among clinicians and public health researchers. Scientific discoveries and advances in this research field play a critical role in providing a rational basis for informed decision-making toward control and prevention of human diseases, especially the illnesses that are induced from environmental exposure to health hazards.

IJERPH provides a forum for discussion of discoveries and knowledge in these multidisciplinary fields. Please consider publishing your research in this high quality peer-reviewed journal.

Author Benefits

Open Access: free for readers, with article processing charges (APC) paid by authors or their institutions.

High Visibility: indexed within Scopus, PubMed, MEDLINE, PMC, Embase, GEOBASE, CAPlus / SciFinder, and other databases.

Journal Rank: CiteScore - Q1 (Public Health, Environmental and Occupational Health)
