Deadline for manuscript submissions:
closed (31 December 2019)

Message from the Guest Editor

The application of robotic devices to rehabilitation of sensorimotor deficits after central nervous system lesions has greatly developed. Clinically usable, and effective devices is constantly improving, but the implementation of robotic rehabilitation into clinical practice is still limited.

Robotic rehabilitation has the potential to provide many advantages in terms of standardization of tasks, real-time measurements and feedback, relief of a physiotherapist's physical burden, and, most importantly, intensity of training. Another potentially relevant advantage is the possibility to detect real-time measures of the patient's performance. Finally, robotic rehabilitation is often integrated with serious games and virtual reality.

This Special Issue aims to cover the abovementioned items, focusing on advances in the development of robotic devices, on neurophysiological mechanisms implied in robotic rehabilitation, including cognitive processes, and on translational research models of implementation, sustainability, and effects of robotic rehabilitation, applied to stroke and to other neurologic conditions.

Message from the Editor-in-Chief

Addressing the environmental and public health challenges requires engagement and collaboration among clinicians and public health researchers. Discovery and advances in this research field play a critical role in providing a scientific basis for decision-making toward control and prevention of human diseases, especially the illnesses that are induced from environmental exposure to health hazards. *IJERPH* provides a forum for discussion of discoveries and knowledge in these multidisciplinary fields. Please consider publishing your research in this high quality, peer-reviewed, open access journal.

Author Benefits

Open Access: free for readers, with article processing charges (APC) paid by authors or their institutions.
High Visibility: indexed within Scopus, PubMed, MEDLINE, PMC, Embase, GEOBASE, CAPlus / SciFinder, and other databases.
Journal Rank: CiteScore - Q1 (*Public Health, Environmental and Occupational Health*)
