Message from the Guest Editors

For this special issue, we invite contributions providing new insights into the mechanisms behind socioeconomic inequality of health, as well as contributions focusing on the econometric techniques which could be used to unravel the causal structures and pathways.

Specific avenues of research in socioeconomic inequality of health may include, but are not limited to, the modelling of health dynamics and the assessment of the related inequalities using longitudinal panels of data, the incorporation of risk or uncertainty in future health into the measurement of socioeconomic inequality of health, and the development and evaluation of distribution regression approaches in decomposition analyses. New methodological developments in these areas as well as insightful empirical studies by means of national, regional or global datasets are especially welcome.

Message from the Editor-in-Chief

Addressing the environmental and public health challenges requires engagement and collaboration among clinicians and public health researchers. Discovery and advances in this research field play a critical role in providing a scientific basis for decision-making toward control and prevention of human diseases, especially the illnesses that are induced from environmental exposure to health hazards. *IJERPH* provides a forum for discussion of discoveries and knowledge in these multidisciplinary fields. Please consider publishing your research in this high quality, peer-reviewed, open access journal.

Author Benefits

Open Access: free for readers, with article processing charges (APC) paid by authors or their institutions.

High Visibility: indexed within Scopus, PubMed, MEDLINE, PMC, Embase, GEOBASE, CAPus / SciFinder, and other databases.

Journal Rank: CiteScore - Q1 (*Public Health, Environmental and Occupational Health*)
